Assembly Point Securely fit the bottom rear part of the side cover into the base cover. Numerals will appear on the touch panel. The respective test mode will be entered when the numeral is pressed. There should be a 34 mm slack in the timing belt when it is pressed with a force of 200g. ADJUSTMENT Timing belt Loosen the screw of the belt adjusting pulley. Turn the balance wheel to move the needle to the needle down position. Loosen the screw securing the zigzag connecting rod assembly. The clearance between the needle and the rotary hook point should be 0.1 mm or less, and they should never touch each other. Install the outer rotary hook. Tighten the screw on the bushing presser L by turning the eccentric metal. Make sure that there is no backlash on the gears. Loosen the screw securing the vertical feed roller shaft. Loosen the screw of the presser bar guide bracket. Adjust the height of the presser bar by moving it vertically. Tighten the screw of the presser bar guide bracket. ADJUSTMENT Select test mode No.10 on the touch panel. ADJUSTMENT Loosen the screw securing the pulse motor. Threading is possible when needle is located higher than 8 mm from the needle plate. CHECK refer to illustration Case A Hook position is too high. ADJUSTMENT Move the X carriage unit all the way to the right. ADJUSTMENT Move the Y carriage all the way forward. After the X carriage is moved to the left, be sure that the X pulse motor gear does not contact the initial rubber. PROBLEM CHECK REMEDY 1. When power is turned 1 Has the display

contrast been adjusted 1 Adjust the contrast. When turning 3 Adjust or replace ATPM holder AT pulse motor gear manually, does it turn easily, and complete. Make sure your top tension dial is in the middle setting usually 4 or 5 What type of thread are you using. Cheaper thread such as Coats and Clark and old thread is very weak. Check out your local independent sewing dealer and have them recommend thread to you based upon the fabric your using. <http://augustaelectricalwork.com/editorData/cybex-700c-manual.xml>

If its at 4 or 5, i would turn it down to about 3 ish. Cotton thread is more brittle than polyester and rayon thread. Hope that helps Chris Login to post Part Number is XA9844 which is written under the needle plate. There are sewing machine parts vendors or sometimes the part will be available on auction sites, ie eBay. You can also look for internet groups who sell sewing machines, parts, accessories, etc.. Seems to sometimes hits needle plate The balance wheel has recently become perceptably tighter to turn and when running the machine at between half and full speed there is a smell of rubber. This has never been. Possibly needs internal oiling. If its at 4 or 5, i would turn it down to about 3 ish. Hope that helps Chris And now I cant get thread out. What do I do I have used it like crazy. I am now having issues with the tension. I have rewound the bobbin, changed threads, different bobbins, cleaned underneath the plate. I have also changed the tension and thread density settings from auto. Nothing is working. What else can I look at to solve the problem Answer questions, earn points and help others. By using the Select a language button, you can choose the language of the manual you want to view. Browse our range of beginner, intermediate and advanced sewing machines and find the perfect machine for you. Contact; Site map; Brother Sewing Machine Manuals. 10, 15, 110, 120, 120E, 230, 240, 230E, 240E Super Ace II 955, Super Ace III Super Galaxie 2000, 2100. Service Manual BROTHER Super Galaxie 2. Computerised machines will remind you to do this. This will switch the machine back to Rethread the machine following the threading instructions in your machine's instruction manual. You will also find instructions for your machine online via the Brother solutions centre Note We find that Butterfly and Singer Branded needles are often not compatible with Brother sewing machines and may cause issues with your machine not picking up lower thread. We would recommend using either Organ or Schmetz branded needles. Rethread the machine following the instructions in your manual and ensure that the foot is raised. If there is tension when pulling the thread, then the thread may be unsuitable for machine sewing and should be replaced with machine sewing thread from a reputable brand. It's possible there be a timing issue with your machine. Contact your Brother dealer to arrange a service or contact our customer service team. Make sure the presser foot is lifted before threading the machine. Set your bobbin correctly into the machine. For top loading bobbins, the thread needs to be going around the bobbin in an anticlockwise direction. Use the guides on your machine or refer to your instruction manual. If you have a mechanical machine, check that the foot is lowered before sewing. Computerised machines will remind you to do this. Using thread that does not pull through smoothly can cause thread breakages, poor stitching or damage to your machine. For best results, you should use a good quality, branded thread. The thread should pull through the machine with no tightness. Learn more opens in a new window or tab This amount is subject to change until you make payment.
